

Geochemical and mineralogical controls on the distribution of rare earth elements in the laterites of Serra de Monchique, Portugal

Liam Hardy, Martin Smith, +1 author A. Marsellos • Published 1 April 2016 • Geology, Environmental Science • Applied Earth Science

Current European manufacturing relies heavily on imports from China for unprocessed rare earth elements (REEs) and rare earth oxides (REOs). It has been suggested that the EU holds viable reserves of REEs that, with adequate research, could satisfy 10% of EU demand, by the recycling of mine waste from bauxite production (red muds) alone (Deady 2014). Focus has been turned to the potential for similar South China type laterite deposits being exploited in the EU, but limited exploration and... [Expand](#)

Rare earth element mineralogy and geochemistry in a laterite profile from Madagascar

A. Berger

E. Janots

E. Gnoss

R. Frei

F. Bernier

Geology, Environmental Science · 2014

Abstract In this study, rare earth element (REE) distribution has been investigated in a weathering profile from central Madagascar. Combination of bulk rock geochemical data (elements and isotopes)... [Expand](#)
